Dear Readers,

Every action and its outcome is a result of serious thought, planning and execution. A thought that has been enduring in mind when it becomes real; is truly an interesting and exciting experience. A newsletter mirrors a college; It's Vision and Mission. Also, It highlights technical and non-technical activities, events, academic progress and achievements. This spring was one such cherished work that had its roots in the persuasion. DMI SPRING will serve to reinforce and allow increased awareness, improved interaction and integration among all of us. It would be a snapshot of the various activities and advancements for all associated with DMICE.

The screenshot shows a Google Meet window with a presentation slide titled "Type of beam" and "Deflection (δ)". The slide contains two cases:

Type of beam	Deflection (δ)
Simply supported beam with a uniformly distributed load of w per unit length.	$\delta = \frac{5}{384} \times \frac{wl^4}{EI}$ (at the centre)
Fixed beam with an eccentric point load W .	$\delta = \frac{Wab^3}{3EII}$ (at the point load)

The diagram for the fixed beam shows a beam of length l with a point load W at a distance a from the left support and b from the right support.

The screenshot shows a Google Meet window with a presentation slide titled "Sub-divisions of Theory of Machines". The slide text reads:

The Theory of Machines may be sub-divided into the following four branches :

1. Kinematics.
2. Dynamics.
3. Kinetics.
4. Statics.
